

ECO-FLOW

LOW PRESSURE GAS GEYSERS

DEWHOT
COMMITMENT TO QUALITY

Introducing the Dewhot Eco-Flow Low Pressure Range of Gas Geysers

Hot water guaranteed,
anywhere, anytime, anyplace...

Delivering hot water to the most remote hunting lodges, game parks and homesteads, the Dewhot Eco-Flow gas geyser runs efficiently off gravity fed water. This low pressure gas geyser takes you from cold to hot at the turn of a tap.

If you're looking for a safe, economic and eco-friendly gas geyser, the Dewhot Eco-Flow is the perfect solution for you.

Running off just 2 meters of water head and a flow as low as 3 litres per minute, the Eco-Flow gas geyser is more than capable of **providing hot water to the most remote and challenging locations.**

The simplicity of the geyser's operating components make it economically viable. A dual float/paddle wheel flow sensor activates the geyser from just two D cell batteries, **keeping maintenance to a minimum.**

With safety being paramount, we've added a smart feature that in the event that there is a burst pipe or the water tap is left on accidentally, the geyser will cut out after 20 minutes.

We have designed the Eco-Flow gas geyser to be placed internally so that the units are safe and secure when lodges, camps or homes are not in use.

It is the Dewhot Eco-flow's versatility that is winning customers over with its **ALL water pressure applications**, be it low water pressure or normal municipal water pressure.

If you're off the **grid, out in the middle of nowhere**, the Dewhot Eco-Flow range makes sure your hot water is always on the flow.

Dewhot specialises in gas geysers, it is this focus that allows us to deliver **top quality products at great value.** This combined with our **exceptional service and support** sets us apart from the other brands.

Downtime is minimized with our **speedy warranty response team**, our guaranteed availability of all spares, and our experienced technicians who resolve faults quickly.
